WELCOME MESSAGE FROM THE CHAIR

On behalf of the Organizing Committee, it is my greatest pleasure to welcome you to the 2020 IEEE Congress on Evolutionary Computation (IEEE CEC 2020), as part of the 2020 IEEE World Congress on Computational Intelligence (IEEE WCCI 2020). IEEE WCCI 2020 was planned to be held in Glasgow, Scotland, but unfortunately, all presentations will be given online due to the outbreak of Covid-19.

Financially sponsored by the IEEE Computational Intelligence Society, IEEE CEC 2020 is a major event in the field of evolutionary computation and covers all topics in evolutionary computation from theory to applications. The aims of this congress are to provide a forum for researchers and practitioners in the field of Evolutionary Computation to exchange the latest advances and demonstrate state-of-the-art in theory, algorithm design, and real-world applications, and to explore new directions, in particular in the emerging interdisciplinary areas of evolutionary learning, as an emerging popular research area of Artificial Intelligence.

Since the first WCCI taking place in Orlando in 1994, this Congress series and the Evolutionary Computation community have progressed tremendously. This year, IEEE CEC 2020 showcases a series of CEC Special Sessions (42), Cross-Disciplinary and Computational Intelligence (CDCI) Applications Special Sessions (30), and Workshops (1), free tutorials (17) covering comprehensive activities. We received a total of 690 high-quality papers from more than 54 countries. Based on a rigorous review process, CEC 2020 accepted 426 papers for inclusion in the conference program. The top 10 contributors by country are China (19.5%), USA (10.3%), United Kingdom (10.0%), Brazil (6.7%), Australia (5.8%), Japan (5.2%), India (4.6%), Germany (3.5%), Spain (3.4%) and Italy (3.2%). The healthy mix of topics provides a constructive spread with a notable trend. For example, applications of evolutionary computation is the most popular among all topics, while evolutionary multi- and many-objective optimization remains a hot topic. A clear new trend is the integration of evolutionary computation with machine learning, including the use of evolution for learning, such as evolutionary neural architecture search, evolutionary clustering, and learning classifier systems, as well as the use of machine learning to assist evolutionary optimization, such as data-driven surrogate-assisted evolutionary optimization, transfer learning and transfer optimization, and hyper-heuristics. In addition, the interest in genetic programming has resurged, partly due to the important role it plays in evolutionary learning. Finally, evolutionary scheduling and combinatorial optimization has also become one popular topic. It is really exciting to see that the research of evolutionary computation remains growing.

I would like to thank the guidance and support of the General Co-Chairs: Amir Hussain, Xin Yao and Marios Polycarpou. I am particular grateful to the IEEE CEC 2020 Technical Co-Chairs Hisao Ishibuchi, Jing Liu, Dipti Srinivasan, and Andy Tyrrell for their great time and efforts. I am also grateful to Juergen Branke, Jonathan Fieldsend, Jose A. Lozano, and Sanaz Mostaghim for serving as the Best Papers Award Committee members.

Last but not least, I would like to express my gratitude to the plenary speakers – Barbara Hammer, Kay Chen Tan, Carlos Coello Coello, and Jim Bezdek for accepting our invitation, to all the authors who submitted their work, to the program committee and reviewers, to all the participants of IEEE CEC 2020 and to the members of the Organizing Committee. Finally, I would also like to acknowledge the great support of the IEEE WCCI 2020 sponsors, i.e., the IEEE and the IEEE Computational Intelligence Society.

Yaochu Jin, IEEE CEC 2020 Conference Chair
