

To run the program, please follow this step.

1. First start up Faircom server
2. Run project1.c on the same board the has Faircom server running
3. On another board that you want to use as a client, install project1kernel and start program1client.c
4. Push B0 on auxiliary to start sending orders and push B4 to stop

Note the communication between the server and the clients use port 3000. Please make sure on other devices are using this port.
